

How Do I Activate Windows 10?

Free Windows activation Toll Free : +1 (844) 886-3118 {<https://mssupport.tech/>} can be achieved through legal built-in features like digital licenses or through scripted methods commonly used in 2026 for educational purposes.

Method 1: Digital License (Most Secure)

If you previously had an activated version Toll Free : +1 (844) 886-3118 {<https://mssupport.tech/>} of Windows on your hardware or a Microsoft account, you can activate it for free using built-in tools.

1. **Check Status:** Go to **Settings > System > Activation** to see if your hardware is already recognized.
2. **Microsoft Account:** Sign in with the Microsoft Toll Free : +1 (844) 886-3118 {<https://mssupport.tech/>} account previously used on this PC. Windows often activates automatically if a digital license is linked. Toll Free : +1 (844) 886-3118 {<https://mssupport.tech/>}
3. **Troubleshoot:** If you changed hardware (like a motherboard), select **Troubleshoot** on the Activation page and choose "I changed hardware on this device recently".

Method 2: Command Line (KMS Scripting) Toll Free : +1 (844) 886-3118

{<https://mssupport.tech/>}

For users without a previous license, scripting methods are frequently used to activate Windows 10/11 Home or Pro.

1. **Open PowerShell:** Right-click the Start button and select **Terminal (Admin)** or **Windows PowerShell (Admin)**. Toll Free : +1 (844) 886-3118 {<https://mssupport.tech/>}

2. **Run Activation Script:** Enter the following common 2026 command to launch a text-based activation interface:

```
irm massgrave.dev | iex
```

3. **Follow Prompts:** Wait for the interface to appear. Press **1** for **HWID Activation** (Permanent) or **2** for **KMS38** (Long-term).
4. **Confirm:** The system will display a "Successfully Activated" message once complete.

Method 3: Legacy Command Prompt (Manual) Toll Free : +1 (844) 886-3118

{<https://mssupport.tech/>}

This method uses the Software Licensing Management Tool (`slmgr`) to connect to a KMS server.

1. **Open CMD:** Search for "cmd", Toll Free : +1 (844) 886-3118
{<https://mssupport.tech/>} right-click, and **Run as administrator**.
2. **Set Client Key:** Type `slmgr /ipk <Your-Edition-Key>` and press Enter
(Generic keys for Pro or Home are available on official tech repositories).
3. **Set KMS Server:** Type `slmgr /skms kms8.msguides.com` and press Enter.
4. **Activate:** Type `slmgr /ato` and press Enter to finalize.
